DETAILED ACTION***Election/Restrictions***

Claims 1 and 10 are generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 5, 6, 14 and 15, directed to a non-elected species are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim. In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

1. Claims 1-20, 23 and 24 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claims 1-20, 23 and 24 are allowable since certain key features of the claimed invention are not taught or fairly suggested by the prior art. In claims 1 and 10, "the static random access memory of the at least two sub-pixels being connected to the same scanning line". In claims 8, 9, 17 and 18, "connecting the static random access memory of the at least two sub-pixels of each of the pixels to the same scanning line". The closest prior art, Huston (2002/0101396) teaches pixels having a plurality of sub-pixels, each sub-pixel provided with an SRAM and a switching transistor. However, singularly or combined with other prior art, fails to anticipate or render the above underlined limitations obvious.
